CONTENTS OF VOLUME 184

NUMBER 1, JANUARY 1990

Noncyclooxygenase Oxidative Formation of a Series of Novel Prostaglandins: Analytical Ramifications for Measurement of Eicosanoids — *Jason D. Morrow, Thomas M. Harris, and L. Jackson Roberts II* 1

Measurement of Oxidation–Reduction Midpoint Potentials by Room Temperature Electron Paramagnetic Resonance Potentiometry — *Christopher J. Kay and Michael J. Barber* 11

High-Performance Liquid Chromatographic Method for Determination of Hypusine and Deoxyhypusine — *Simone Beninati, Alberto Abbruzzese, and J. E. Folk* 16

Comparison of a Spectrophotometric, a Fluorometric, and a Novel Radiometric Assay for Carboxypeptidase E (EC 3.4.17.10) and Other Carboxypeptidase B-like Enzymes — *Lloyd D. Fricker and Lakshmi Devi* 21

Identification of Methionine-Containing Tryptic Peptides of Unstable β-Tubulin Separated by Reverse-Phase High-Performance Liquid Chromatography — *Americo M. Minotti, Lisa M. Loeb, Richard Cook, Barbara A. Boggs, and Fernando Cabral* 28

The Determination of the Mg^{2+}·ATP Dissociation Constant by Competition with Eu^{3+} Ion Using Laser-Induced Eu^{3+} Ion Luminescence Spectroscopy — *Charles W. McNemar and William DeW. Horrocks, Jr.* 35

Determination of Aconitate Isomerase in Plants — *John F. Thompson, Stephen C. Schaefer, and James T. Madison* 39

Heterogeneity among Membrane Vesicles of *Escherichia coli:* Effects of Production and Fractionation Techniques — *Gertrude H. Jacoby and Kevin D. Young* 48

A Radiometric Kynurenine Monooxygenase Assay — *Jeffrey S. Wiseman and James S. Nichols* 55

Synthesis of Nucleic Acid Probes on Membrane Supports: A Procedure for the Removal of Unincorporated Precursors — *Suraj P. Bhat* 59

A Paper Membrane Filter Assay for Ciliate Chemoattraction — *Vagn Leick, Karin Frederiksen, Inger Lyhne, and Per Hellung-Larsen* 63

Filtration Assay for Quantitation of 2,3,7,8-Tetrachlorodibenzo-*p*-dioxin (TCDD) Specific Binding to Whole Cells in Culture — *Karen M. Dold and William F. Greenlee* 67

Calculation of Subunit Stoichiometry of Large, Multisubunit Proteins from Amino Acid Compositions — *O. H. Kapp, A. N. Qabar, and S. N. Vinogradov* 74

Determination of Poly(ADP-ribose) Chain Length Distribution on Polyacrylamide Gels by Silver Staining — *Haim Hacham and Ruth Ben-Ishai* 83

High-Performance Liquid Chromatographic Determination of β-Phenylethylamine in Human Plasma with Fluorescence Detection — *Junichi Ishida, Masatoshi Yamaguchi, and Masaru Nakamura* 86

Optimization of Northern Analysis by Vacuum-Blotting, RNA-Transfer Visualization, and Ultraviolet Fixation — *Richard A. Kroczek and Erwin Siebert* 90

Detection of Hemoprotein Peroxidase Activity on Polyvinylidene Difluoride Membrane — *Chhanda Dutta and Helen L. Henry* 96

Purification of Gramicidin A — *Charles J. Stankovic, Jose M. Delfino, and Stuart L. Schreiber* 100

Adaptation of an Enzymatic Cycling Assay for NADP(H) Measurement to the COBAS-FARA Centrifugal Analyzer — *Barbara L. Lewis and Eugene T. McGuinness* 104

Increased Uniformity in the Response of the Coomassie Blue G Protein Assay to Different Proteins — *Christa M. Stoscheck* 111

A Method for Binding Parameters Estimation of A_1 Adenosine Receptor Subtype: A Practical Approach — *Vicent Casadó, Teresa Martí, Rafael Franco, Carme Lluis, Josepa Mallol, and Enric I. Canela* 117

A Fiberoptic Cholesterol Biosensor with an Oxygen Optrode as the Transducer — *Wolfgang Trettnak and Otto S. Wolfbeis* 124

Enzymatic Activities in Extracts of Small (20 ± 5 mg) Samples of Prostatic Carcinoma
Raymond R. Rackley, Terrence J. Lewis, Edwin L. Bradley, Jr., Howard S. Levin, Martin I. Resnick, Theresa P. Pretlow, and Thomas G. Pretlow II 128

Estimation of Elution Times on Reverse-Phase High-Performance Liquid Chromatography of Pyridylamino Derivatives of Sugar Chains from Glycoproteins *Sumihiro Hase and Tokuji Ikenaka* 135

On the Application of the Clark Oxygen Electrode to the Study of Enzyme Kinetics in Apolar Solvents: The Catalase Reaction *Laura Escobar, Carolina Salvador, Martha Contreras, and J. Edgardo Escamilla* 139

Blood Group A Glycolipid Antigen Biosynthesis: Discrimination between Biosynthesized and Enzyme Preparation Derived Blood Group A Antigen by Mass Spectrometry
J. Holgersson, A. Jacobsson, M. E. Breimer, and B. E. Samuelsson 145

Analysis of Derivatized Ceramides and Neutral Glycosphingolipids by High-Performance Tandem Mass Spectrometry *Bruno Domon, James E. Vath, and Catherine E. Costello* 151

A Dual Streaming Potential Device Used as an Affinity Sensor for Monitoring Hybridoma Cell Cultivations
Akiyoshi Miyabayashi and Bo Mattiasson 165

DESIGN: Computerized Optimization of Experimental Design for Estimating K_d and B_{max} in Ligand Binding Experiments. II. Simultaneous Analysis of Homologous and Heterologous Competition Curves and Analysis of Blocking and of "Multiligand" Dose–Response Surfaces
G. Enrico Rovati, David Rodbard, and Peter J. Munson 172

Flow Injection Fluorometry of Protein Using Hypochlorite–Thiamine Reagent
Toshio Yokoyama, Noriko Nakamura, and Toshio Kinoshita 184

Spectrophotometric Quantitation of Anchorage-Dependent Cell Numbers Using the Bicinchoninic Acid Protein Assay Reagent *George P. Tuszynski and Andrew Murphy* 189

BOOK REVIEWS

Gas Chromatography and Lipids: A Practical Guide. By William W. Christie Reviewed by *Howard Goldfine* 192

Yeast Genetics, a Manual of Methods. By J. F. T. Spencer, D. M. Spencer, and I. J. Bruce
Reviewed by *Sanford J. Silverman* 192

NUMBER 2, FEBRUARY 1, 1990

Automated Assays for Superoxide Dismutase, Catalase, Glutathione Peroxidase, and Glutathione Reductase Activity
Conrad R. Wheeler, Jhaine A. Salzman, Nabil M. Elsayed, Stanley T. Omaye, and Don W. Korte, Jr. 193

Analysis of Oligogalacturonic Acids with 50 or Fewer Residues by High-Performance Anion-Exchange Chromatography and Pulsed Amperometric Detection *Arland T. Hotchkiss, Jr. and Kevin B. Hicks* 200

Electroblotting of Double-Stranded DNA for Hybridization Experiments: DNA Transfer Is Complete within 10 Minutes after Pulsed-Field Gel Electrophoresis *Hiroshi Ishihara and Mikio Shikita* 207

Determination of Methylguanidine in Plasma and Urine by High-Performance Liquid Chromatography with Fluorescence Detection following Postcolumn Derivatization
Venkata K. Boppana, Gerald R. Rhodes, and David P. Brooks 213

Ferrioxamine and Its Hexadentate Iron-Chelating Metabolites in Human Post-Desferal Urine Studied by High-Performance Liquid Chromatography and Fast Atom Bombardment Mass Spectrometry
W. D. Lehmann and H. C. Heinrich 219

Arylalkylamine (Serotonin) *N*-Acetyltransferase Assay Using High-Performance Liquid Chromatography with Fluorescence or Electrochemical Detection of *N*-Acetyltryptamine
K. Bradford Thomas, Jolanta Zawilska, and P. Michael Iuvone 228

Separation of Oligosaccharides by Capillary Supercritical Fluid Chromatography and Analysis by Direct Coupling to High-Resolution Mass Spectrometer: Application to Analysis of Oligomannosidic *N*-Glycans
Yves Leroy, Jérôme Lemoine, Guy Ricart, Jean-Claude Michalski, Jean Montreuil, and Bernard Fournet 235

Stability of Water-Soluble Carbodiimides in Aqueous Solution
Maxime A. Gilles, Antoine Q. Hudson, and C. L. Borders, Jr. 244

Large-Scale Preparation and Characterization of N-Linked Glycopeptides from Bovine Fetuin
Kevin G. Rice, Narasinga B. N. Rao, and Yuan C. Lee 249

Colorimetric Micromethods for Glutaraldehyde Determination by Means of Phenol and Sulfuric Acid or Phenol and Perchloric Acid
Janusz Boratyński and Tomasz Żal 259

Sample Processing Alters Glutathione and Cysteine Values in Blood
Betty J. Mills, John P. Richie, Jr., and Calvin A. Lang 263

Selective Purification of Microtubule-Associated Proteins 1 and 2 from Rat Brain Using Poly(L-aspartic acid)
Toshihiro Fujii, Akira Nakamura, Yoshiro Ogoma, Yoshiyuki Kondo, and Takao Arai 268

Use of Nonlinear Regression to Analyze Enzyme Kinetic Data: Application to Situations of Substrate Contamination and Background Subtraction
Robin J. Leatherbarrow 274

Partial Purification of a Thylakoid-Bound Enzyme Using Temperature-Induced Phase Partitioning
Alvaro Sánchez-Ferrer, Roque Bru, and Francisco García-Carmona 279

Rapid and Serial Determination of Protein Kinase C Activity and of the Associated [^{3}H]PDBu Binding Using a 96-Well Microtiter Plate and a Cell Harvester
Marc R. Parant and Henri J. Vial 283

Assay for 2-Oxoglutarate Decarboxylating Enzymes Based on the Determination of [1-^{14}C]Succinate: Application to Prolyl 4-Hydroxylase
Gunhild Kaule and Volkmar Günzler 291

Photochemical Crosslinking in Oligonucleotide–Protein Complexes between a Bromine-Substituted 2-5A Analog and 2-5A-Dependent RNase by Ultraviolet Lamp or Laser
Nancy L. Nolan-Sorden, Krystyna Lesiak, Bernard Bayard, Paul F. Torrence, and Robert H. Silverman 298

Purification of Eucaryotic Extrachromosomal Circular DNAs Using Exonuclease III
James W. Gaubatz and Sonia C. Flores 305

A Simple Enzymatic Method for the Preparation of Radiolabeled Erucoyl-CoA and Other Long-Chain Fatty Acyl-CoAs and Their Characterization by Mass Spectrometry
David C. Taylor, Nikolaus Weber, Lawrence R. Hogge, and Edward W. Underhill 311

Spectrophotometric Enzymatic Assay for *S*-3-Hydroxyisobutyrate
Paul M. Rougraff, Ralph Paxton, Gary W. Goodwin, Reid G. Gibson, and Robert A. Harris 317

2′,3′-Cyclic Nucleotide Phosphohydrolase Activity Determined Using an Image Analyzer Detection System
Alexander S. Jacks III and Marjorie A. Jones 321

Reaction of α-Tubulin with Iodotyrosines Catalyzed by Tubulin:Tyrosine Ligase: Carboxy-Terminal Labeling of Tubulin with [^{125}I]Monoiodotyrosine
Marcel Joniau, Katleen Coudijzer, and Marcel De Cuyper 325

Synthesis and Applications of 8-Azido Photoaffinity Analogs of P^1,P^3-Bis(5′-adenosyl)triphosphate and P^1,P^4-Bis(5′-adenosyl)tetraphosphate
Mark Prescott and Alexander G. McLennan 330

Determination of Reduced, Oxidized, and Protein-Bound Glutathione in Human Plasma with Precolumn Derivatization with Monobromobimane and Liquid Chromatography
Asbjørn M. Svardal, Mohammad A. Mansoor, and Per M. Ueland 338

The Use of Acetylated Factor X to Prevent Feedback Activation of Factor VIII during Factor X Activation: A Tool for Kinetic Studies
Pierre Neuenschwander and Jolyon Jesty 347

Determination of Dityrosine, Phosphotyrosine, Phosphothreonine, and Phosphoserine by High-Performance Liquid Chromatography
Dean A. Malencik, Zhizhuang Zhao, and Sonia R. Anderson 353

High-Performance Liquid Affinity Chromatography and *in Situ* Fluorescent Labeling on Thin-Layer Chromatography of Glycosphingolipids
Yasuko Tomono, Kazuo Abe, and Kiyohiro Watanabe 360

A Sensitive and Specific Assay for Superoxide Anion Released by Neutrophils or Macrophages Based on Bioluminescence of Polynoidin
Pio Colepicolo, Valéria C. P. C. Camarero, Marie Thérèse Nicolas, Jean-Marie Bassot, Manfred L. Karnovsky, and J. Woodland Hastings 369

Enzyme-Linked Coagulation Assay: V. Amplified Blotting Assays Using Snake Venom Conjugates
Kristine H. Durkee, Therese M. Cheng, and George J. Doellgast 375

Nitrate Analysis by Capillary Gas Chromatography
Michael J. Dunphy, Douglas D. Goble, and Daniel J. Smith 381

A Competitive Assay of Lipoprotein: Proteoglycan Interaction Using a 96-Well Microtitration Plate
James E. Christner and John R. Baker 388

Determination of Hopanoid Levels in Bacteria Using High-Performance Liquid Chromatography
Kevin D. Barrow and Jo-Anne Chuck 395

Author Index for Volume 184 400

NOTICE

The Subject Index for Volume 184 will appear in the December 1990 issue as part of a cumulative index for the year 1990.

ANALYTICAL BIOCHEMISTRY
Methods in the Biological Sciences

INFORMATION FOR AUTHORS

Analytical Biochemistry is an international journal that publishes original articles on methods and methodology of interest to the biological sciences and all fields that impinge on biochemical investigation. In addition to the expected techniques that apply to biochemical preparations and analysis, the following should be considered as within the scope of the journal:

— Cell biology and cell, tissue, and organ culture methods that are of general application.

— Membranes and membrane proteins. These methods form a major section of interest.

— Procedures of interest in the field of molecular genetics including those necessary for cloning, sequencing, and synthesis of nucleic acids and for mutagenesis.

— Purification of enzymes and other proteins, but only if the methods are both novel and applicable generally, i.e., the interest is in a means of purification rather than in the protein that is being purified.

— Immunological techniques both analytical and preparative, if they are of general applicability by biochemists. Immunoassays are included but only if a unique approach is introduced rather than the determination of a substance not previously assayable.

— Pharmacological and toxicological research techniques that offer a biochemical approach.

— Review articles dealing with timely topics. Although these are generally invited, unsolicited outlines or manuscripts will be considered.

Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in **Analytical Biochemistry** represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Address. Manuscripts should be submitted in quadruplicate to:

Analytical Biochemistry

Editorial Office
Seventh Floor
1250 Sixth Avenue
San Diego, California 92101

In the case of rejected manuscripts, only one copy of the manuscript will be returned to the author.

An extended Instructions to Authors is published in the July issue during odd-numbered years. Reprints are available from the Editorial Office. Authors should consult this Information for details on nomenclature, IUPAC-IUB rules and recommendations, and accepted abbreviations.

Manuscripts should be concise and consistent in style, spelling, and use of abbreviations. In order to facilitate the processing of manuscripts, the journal requests that at least four copies be submitted, each copy to include all figures (originals or glossy prints) and tables. The original copy must be typewritten, double-spaced, on one side of white bond paper, about $8\frac{1}{2} \times 11$ inches in size, with one-inch margins on all sides. Each manuscript should have a separate title page noting title of article, authors' names (without degrees), a running title (not exceeding 55 letters and spaces), an abstract (250 words), the address to which proof should be mailed, and the corresponding author's telephone number and fax or telex number. In creating a title for your paper, please omit words such as *novel*, *rapid*, *improved*, *simple*, *sensitive*, *efficient*, *convenient*, *new*. Each is felt to be redundant and actually slows down the reader who is scanning the article titles and wants to know more about the method itself. Please substitute informative words that will give readers a more complete idea of the usefulness of your paper with regard to the limitations of their equipment or sample type. Abbreviations should not be used in the article title or running title. Please number all pages of the manuscript. The appropriate subject category should be indicated on the title page.

Text. The suggested organization of an article is: abstract; introductory statement; Materials and Methods; Results; Discussion; Acknowledgments; References. Some of these sections may be combined if the presentation is thereby made clearer or more effective. Although this is the general form, the journal will accept variation from it but does require an abstract.

Names of chemical or organic substances should follow the recommendations of the IUPAC–IUB Joint Combined Commission on Biochemical Nomenclature (JCBN) as published in the extended Instructions for Authors, appearing in the July issue of this journal during odd-numbered years.

Authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described; if an accepted code of practice has been followed, a reference to the relevant standards should be given.

Figures should be numbered consecutively with Arabic numerals in order of mention in the text: each figure should have a descriptive legend. Legends should be typed together on a separate sheet, double-spaced. All illustrations should be in finished form ready for photoreproduction. A convenient size for drawings is $8\frac{1}{2} \times 11$ in. (21 × 27.5 cm). They should be planned to fit the proportion of the printed page ($7\frac{1}{8} \times 9$ in.; column width, $3\frac{1}{2}$ in.). Lettering on drawings should be of professional quality or generated by *high-resolution* computer graphics and should be large enough that in the printed version the lettering is 6–8 point. Except for single-letter part designations lettering on printed figures should not be larger than 10 points. Wide variation in type sizes is undesirable. If, after reduction, the type in the figures would be larger than the type in the text, then publication of the article may be delayed. Drawings should be made with India ink on tracing linen, smooth surface white paper, or Bristol board. Alternatively, *high-quality* computer graphics may be acceptable. Graph paper if used should be ruled in blue. Grid lines that are to show in the final reproduction should be inked in black. Properly prepared glossy prints are acceptable.

Photographs must be kept to a minimum. All photographs should be submitted as single glossy prints with strong contrasts and not mounted on cardboard; the magnification should be indicated by a scale where possible. Simple histograms should be avoided. A table or a paragraph in the text is preferred.

Illustrations in color can be accepted only if the authors defray the cost.

Tables should be typed on separate pages, numbered consecutively with Arabic numerals in order of mention in the text. Each table should have a short explanatory title.

Authors may wish to submit complex tables or sequence information as camera-ready copy. In this way, they are spared tedious proofreading and the chance of error is reduced. Tables submitted as camera-ready copy should be typed single-spaced whenever possible, and preferably submitted as 5 × 7-in. glossy prints.

Footnotes should be designated in text by superscript numbers and typed on a separate sheet following the References. Footnotes to tables should be identified with lowercase italic superscript letters and placed at the bottom of the table.

References to the literature should be cited in the text by Arabic numerals in parentheses and listed at the end of the paper in consecutive order. Abbreviations of journal titles should follow the style used in *Chemical Abstracts Service Source Index,* 1985. Please note style of capitalization and punctuation for journal articles and edited books in the following examples:

1. Mitchell, L. G., and Merril, C. R. (1989) *Anal. Biochem.* **178,** 239–242.
2. Bovey, F. A., and Jelinski, L. W. (1983) Chain Structure and Conformation of Macromolecules, p. 150, Academic Press, New York.
3. Kaminsk, L. S. (1985) *in* Bioactivation of Foreign Compounds (Anders, M. W., Ed.), pp. 157–175, Academic Press, Orlando, FL.

Proofs. Proofs will be sent to the authors with reprint order forms. Fifty reprints of each article are provided free of charge. Additional reprints may be ordered using the form provided.

For information about advertising in *Analytical Biochemistry*, please contact Julie Davis, Advertising Coordinator, Journal Promotion Department, Academic Press, Inc., 1250 Sixth Avenue, San Diego, California 92101 (telephone: (619) 699-6825).

When A Series Becomes A Classic.

METHODS IN ENZYMOLOGY

Editors-in-Chief

John Abelson and Melvin I. Simon

"...a true 'methods' series, including almost every detail from basic theory to sources of equipment and reagents, with timely documentation provided on each page."

—BIO/TECHNOLOGY

"The appearance of another volume in that excellent series, **Methods in Enzymology**, *is always a cause for appreciation..."*

—AMERICAN SOCIETY OF MICROBIOLOGY NEWS

"*If we had some way to find the work most often consulted in the laboratory, it could well be Colowick and Kaplan's multivolume series* **Methods in Enzymology**....*[a] great work."*

—ENZYMOLOGIA

The critically acclaimed laboratory standard for more than thirty years. **Methods in Enzymology** is one of the most highly respected publications in the field of biochemistry. Since 1955, each volume has been eagerly awaited, frequently consulted, and praised by researchers and reviewers alike. More than 160 volumes have been published (all of them still in print) and much of the material is relevant even today—truly an essential publication for researchers in the field of the life sciences.
